Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/582,755	Applicant(s) ADAM ET AL.	
	Examiner Karen Masih	Art Unit 2837	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0905334 as cited by applicant in view of Koehl.

EP0905334 disclose control method of automatic cleaning device of an submerged surface in liquid comprising chassis carrying a device for filtration of liquid, units for driving chassis on submerged surface to be cleaned , drive motor means of chassis comprising at least one drive motor of the chassis on submerged surface supported by chassis and arranged to transmit motor movement to at least part of units for driving , electronic supply and control means of each drive motor of chassis , adapted to control reversal of drive direction of units wherein at least one variable providing a value representative of load torque of at least one motor on submerged surface is measured periodically , and control of motors is reversed as to engender displacement of device in direction opposite its direction of initial displacement , see col 1 liens 50-58 and col 2 liens 1-14 . EP 0905334 lacks disclosing obtained predetermined threshold value and in even where threshold value is exceeded a procedure is triggered. Koehl discloses a predetermined threshold value is compared and in even where threshold value is exceeded for motor a procedure is triggered, see paragraph 86. It would have been obvious to one of ordinary skill in the art to combine the automatic cleaning device of

Art Unit: 2837

EP0905334 with threshold value of Koehl for improved control, also one would have to compare current of EP0905334 with threshold to determine stop motor and reverse.
